WHOLE BUILDING COMMISSIONING

The Big Picture - *It's more than M/E/P*

When done correctly, the whole building commissioning process integrates through the life cycle of the design, construction, and operation of a building. Whole building commissioning involves daily activity during design and construction, and creates an invaluable resource during occupancy, for the life of the building. Rather than focusing on just the electrical and mechanical aspects of a building, whole building commissioning addresses the myriad of systems that combine to make a successful facility.

This Presentation will identify roles and responsibilities of all participants in the building design, construction, and operation process that assure project success as well as significant economies for an entire building, throughout its life cycle.

Even if you think you know commissioning basics, this eye opening session will enhance your ability to specify, participate in and enjoy benefits of whole building commissioning.

Who would benefit: Owners, Facility Directors, Architects, Designers, CMs, PMs, Engineers, Commissioning Agents, Estimators, Contractors, Subcontractors, Inspectors, Chief Business Officers, Contract Administrators and more...

PRESENTERS:

Larry Eisenberg, Principal, Ovus Partners 360, has extensive background in building construction, sustainability and renewable energy. He has participated in the design and construction of hundreds of buildings as an owner's rep. While Associate VP of Physical Planning and Development for University of Wisconsin in the 1980's, Larry worked with faculty/colleagues at UW-Madison to help develop and implement the concept of building commissioning. Today building commissioning is recognized as a critical tool to assure quality in construction and long term building value.
